Vendor Managed Inventory & Packaging

Vendor Managed Inventory (VMI) & Packaging

NSK takes the worry out of inventory management. Our VMI programs add value through efficiency:

- VMI programs are integrated with our cutting-edge enterprise resource planning (ERP) system.
- NSK personnel use PDA's to remotely order product and replenish your supplies at point of use.
- System-directed internal replenishment methods ensure your stock levels are maintained.

NSK can address packaging requirements as diverse as the variety of fasteners. We can pack your fasteners into units of sale and pack them for protection during shipment. Whether you require packaging by weight or size, NSK Industries can do the job.

- Automated packaging equipment.
- Manual packaging for odd sizes or unique packaging requirements.

About NSK Industries

NSK Industries was established in 1978 as a machine shop and distributor of fasteners. As the industry and the needs of our customers changed, NSK evolved into the full-line fastener company it is today. In addition to standard and specialty fasteners, we offer vendor-managed inventory programs and packaging services.

Our forte is special fasteners, including cold headed, screw machined and CNC machined items.

Quality

Quality control is our top concern, especially since many of our customers are involved with delivering critical services. Fastener failure is dangerous and costly, which is why NSK puts our custom fasteners through a stringent examination process from manufacturing process evaluation through the finished product.
